7th Int'l Exhibition for Textile and Leather Machinery, Products and Garment

(ISATEX 2012)

8 - 11 May 2012

Yazd - Iran

Textile is one of the oldest and most important industries and almost a century has passed since the establishment of its factory in Iran.

Textile production is among the most varied and sporadic industries in the world enjoying very dynamic trade world wide, it is probably the first commercial activity that began in the small work shops and at home in its primary form. The archaeological evidences dug in Susa shows that industry goes as far back as four thousand years B.C. in Iran.

One special aspect in the production of textile and leather goods which is critically important from the point of view of the manufacturers is access to the latest technology that has brought about a more efficient production process and higher quality in other countries. The first international textile and leather machinery and related industries fair is providing our manufacturers with a golden opportunity to acquaint themselves with the latest state of the art in textile and leather machinery and at the same time display to the public their own achievement in the field.

Abundant skilled labour and suitable raw material combined with long experience have granted our textile and leather products a remarkably high added value and exhibitions of this kind can further familiarize the manufacturing units of our country with the new industrial developments and changes in the world markets, thus aiding them to enhance the technical know-how required in their field of activity.

The **Sima Nassaj Research & Engineering Company** while wishing great success for every participant would like to express its gratitude to all the domestic and foreign firms for their active participation in this year's fair where they can exhibit their textile and leather machinery and other related products.

Best regard

Dr. Mohammad Mirjalili
